EDUCATION

B.Tech [2015-2019] – Computer Science & Engineering

Gandhi Engineering College, Bhubneshwar

SKILLS

- Python
- Checkmk
- FastAPI
- REST API Development
- PostgreSQL
- Atlassian Automation
- Git
- Docker
- Terraform
- Linux
- Shell Scripting
- Kubernetes
- Observability
- Grafana
- Prometheus
- Harshicorp Vault

CERTIFICATIONS

- AWS Cloud Practitioner Certification
- NPTEL Python Certification
- NPTEL ML Certification
- NPTEL DL Certification

Site Reliability Engineer with 7 years of experience in DevOps, infrastructure automation, and Python-based development. Proven ability to enhance production reliability, reduce downtime, and improve operational efficiency through proactive monitoring implementation, automation, and performance optimization.

Strong background in cloud infrastructure support, observability, and GenAI-driven automation solutions. Demonstrated leadership experience in guiding teams, streamlining incident management processes, and significantly reducing mean time to resolution through intelligent automation and monitoring strategies.

WORK EXPERIENCE [MAY 2019 - Present]

TCS, Hyderabad

Site Reliability Engineer

- Led a team of five engineers through a six-month leadership transition, ensuring **operational stability** and consistent SLA compliance.
- Spearheading **GenAI-driven ticket enrichment** and **knowledge automation** initiatives, enabling automated incident detail extraction, **contextual knowledge retrieval**, JIRA updates, **Knowledge Article creation**, and **RCA report generation**.
- Architected and optimized **infrastructure monitoring** using **Checkmk**, enabling proactive alerting across network devices and Kubernetes clusters, improving system visibility, and reducing unplanned downtime.
- Developed **Python-based automation** services to integrate **real-time server health** metrics into JIRA workflows, **enhancing operational** transparency, automating actions, and shortening incident response time.
- Designed and implemented **Grafana** dashboards leveraging the organization's centralized observability service to enhance real-time monitoring, performance analysis, and operational transparency.
- Drove operational excellence through **automation-first** strategies, **monitoring enhancements**, and recurring incident analysis, leading to measurable **MTTR reduction** and improved service reliability.

Technologies: Python, FastAPI, Checkmk NG, K8s, PostgreSQL, LLM, GenAI, Atlassian automation, Grafana

Python Automation Specialist

- Automated cloud infrastructure operations and support workflows to improve system reliability and reduce manual operational overhead.
- Built a **Support Analyzer system** that parses JIRA tickets, extracts server metadata, integrates with monitoring systems, and automatically posts infrastructure health insights into tickets.
- Developed more than **30+ automation** scripts to reduce manual efforts and perform operations on internal infrastructure management platforms.
- Designed and deployed a Django-based analytics dashboard to visualize product-level and assignee-level ticket metrics, improving operational decision-making.
- Led migration to **Checkmk**, configuring 50+ dashboards, enabling host group-based proactive alerting, identifying recurring incident patterns, and implementing automated remediation workflows (including controlled server reboots with JIRA updates).

Technologies: Python, Django, Linux, PostgreSQL, JIRA Automation, Checkmk, Shell Scripting.

DevOps Engineer

- Supported 3 enterprise applications across **QA, UAT, and Production** environments, ensuring stable and reliable deployments.
- Managed **Git** repositories and implemented **CI/CD pipelines** using **Jenkins**, streamlining build and deployment workflows.
- Contributed to containerization initiatives using **Docker**, improving deployment consistency and reducing environment-related issues.
- Collaborated with development and operations teams to enhance release management processes and minimize production risks.

Technologies: Jenkins, Git, Puppet, Linux, Shell Scripting, Docker (Basics)
